CASE DATA:
The Washington State Disease Reporting System (WDRS) is the data source for all case data. Some data have been suppressed due to inaccuracies. Not all tables and graphs will have the same denominator. All trend data are by symptom onset date or date of first positive COVID test. All data are preliminary and subject to change.

SNOHOMISH COUNTY SUMMARY:
- Snohomish County is currently in the low-risk transmission category.
- The Snohomish County COVID-19 case rate continues to trend downward.
- COVID-19-related hospitalizations continue to decline and are less than 4/100,000.
- Higher rates of COVID-19 transmission were seen in the central urban (Lynnwood and S. Everett) and the rural east parts of the county.
- Case rates decreased amongst all age groups, except 20-29-year-olds, which saw a slight increase. Highest case-rates are amongst our 70+ population, which is due to higher rates of testing, and small population size.
- All race/ethnicity case rates decreased except amongst Native Hawaiian/Pacific Islanders which increased in the past week. This is partially due to small population size in Snohomish County.
- Cases associated with reported LTCF outbreaks continue to decrease. There were no new LTCF outbreaks for the past week.
