

Weekly COVID-19 Graphs

June 5, 2022 – April 22, 2023

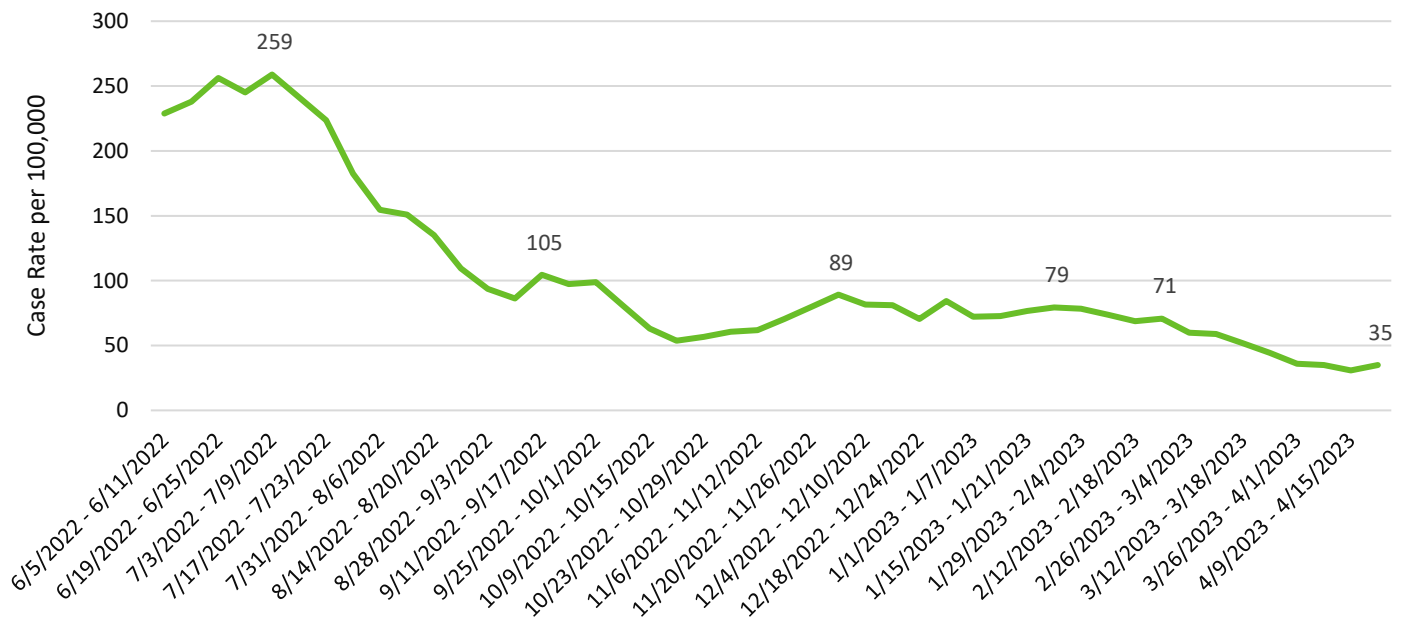

CASE DATA:

The Washington State Disease Reporting System (WDRS) is the data source for all case data. Some data have been suppressed due to inaccuracies. Not all tables and graphs will have the same denominator. All trend data are by symptom onset date or date of first positive COVID test. All data are preliminary and subject to change.

SNOHOMSH COUNTY SUMMARY:

- Snohomish County is currently in the low-risk transmission category.
- The Snohomish County COVID-19 case rate had a slight increase this last week.
- COVID-19-related hospitalizations increased slightly to 4.0/100,000.
- Higher rates of COVID-19 transmission were seen in the southwest and northwest urban areas of the County.
- Case rates remained relatively stable amongst most age groups, except 80+ which saw an increase. Highest case-rates are amongst our 70+ population, which is due to higher rates of testing, and small population size.
- We saw increases in cases week to week for Asian, Black, and American Indian/Alaska Native populations.
- Cases associated with reported LTCF outbreaks increased this past week. There were 4 new LTCF outbreaks for the past week.
