

Weekly COVID-19 Graphs

January 1 – August 12, 2023

CASE DATA:

The Washington State Disease Reporting System (WDRS) is the data source for all case data. Some data have been suppressed due to inaccuracies. Not all tables and graphs will have the same denominator. All trend data are by symptom onset date or date of first positive COVID test. All data are preliminary and subject to change.

SNOHOMSH COUNTY SUMMARY:

- Snohomish County case rates increased slightly over the last two weeks. (Only cases tested by a healthcare provider or laboratory are counted in this report. Homebased tests are not reported to public health and are not included in these data.)
- COVID-19-related hospitalizations increased over the last two weeks with a case rate of 2.9/100,000 for the week of August 6-12.
- COVID-19 transmission was <50/100,000 across most zip codes in Snohomish County. An increase in COVID-19 case rates were seen in the north and east rural part of the county.
- Case rates were relatively stable or saw a slight increase in most age groups. There was a decrease in cases amongst 80+ year-olds after peaking the week of 7/30-8/5/2023. Highest case-rates are amongst our 70+ population, which is due to higher rates of testing, and small population size.
- Case rates decreased or were steady amongst most race/ethnicity groups. Steady increases have been seen amongst Black/African Americans.
- There has been an increase in the number of cases associated with reported LTCF outbreaks in the past couple of weeks. There have been 11 new LTCF outbreak in the past month.
