

COVID-19 Surveillance Report

SNOHOMISH COUNTY SUMMARY: *Data through 10/14/2023*

- Snohomish County case rates have decreased in the last three weeks (figures 1 & 2).
- COVID-19-related hospitalizations remained relatively stable over the few weeks with a case rate of 3.7/100,000 (figures 3 & 4).
- The percent of emergency department (ED) visits with a diagnosis of COVID-19 has decreased slightly over the last week to 1.9% which is **under** the 3% universal making in healthcare facilities threshold (figure 5). Last week COVID-19 hospital census was 3% (figure 6).
- COVID-19 transmission was between 10-49/100,000 across most zip codes in Snohomish County (figure 7). Higher rates of COVID-19 were seen in the northwest part of the county (Marysville, and Lake Stevens).
- Case rates decreased in all age groups (figure 8). Highest case-rates are amongst our 70+ population, which is due to higher rates of testing, and small population size.
- COVID-19 case rates decreased across most race/ethnicity groups (figure 9). Increases were seen amongst Asians for the week of 10/8-10/14/2023.
- The number of cases associated with reported long-term care facility (LTCF) outbreaks decreased last week (figure 10). There were no new LTCF outbreaks over the last week (figure 11).

New Cases (per 100,000 population in the last 7 days)	Indicators	Low	Medium	High
31	New COVID-19 admissions per 100,000 population (7-day total) 3.7	<10.0	10.0-19.9	≥20.0
	Percent of staffed inpatient beds occupied by COVID-19 patients (7-day average) 3%	<10.0%	10.0-14.9%	≥15%
	Percent of ED visits with diagnosis of COVID-19 1.9%	Below 3% masking threshold

DATA SOURCES:

The Washington State Disease Reporting System (WDRS) is the data source for all case data. Some data have been suppressed due to inaccuracies. Not all tables and graphs will have the same denominator. All trend data are by symptom onset date or date of first positive COVID test. Only cases tested by a healthcare provider or laboratory are counted in this report. Homebased tests are not reported to public health and are not included in these data.

The data source for the percent of emergency department visit is the Electronic Surveillance System for the Early Notification of Community-Based Epidemics (ESSENCE) from the National Syndromic Surveillance Program – BioSense Platform. ESSENCE is part of the CDC National Syndromic Surveillance Program (NSSP). Data included are the percent of all emergency visits from hospitals in Snohomish County with a ICD 10-CM discharge diagnosis of COVID-19.

Hospital census data is from WAHealth (<https://wahealth.doh.wa.gov/>). WAHealth is The Regional Government Emergency Response and Monitoring solution. This monitoring system provides a set of capabilities for state and local governments to collect and visualize health system data. Data are collected from parent organizations and associated hospitals in their network/region and are used to establish situational awareness during emergency responses. The data include information about available beds, supplies, equipment, COVID-19 patients, and staffing.

All data are preliminary and subject to change.
