

COVID-19 Surveillance Report

SNOHOMISH COUNTY SUMMARY: *Data through 1/20/2024*

- Snohomish County case rate was stable over the last week (figures 1 & 2).
- COVID-19-related hospitalization case rates increased slightly to 5.4/100,000 (figures 3 & 4).
- The percent of emergency department (ED) visits with a diagnosis of COVID-19 was stable (figure 5). Last week COVID-19 hospital census decreased slightly to 4% (figure 6).
- COVID-19 transmission was 30+/100,000 across most zip codes in Snohomish County (figure 7). Higher rates were seen in the urban core of the county and rural northeast.
- Case rates decreased in most age groups (figure 8). Cases aged 35-64-years-olds saw a slight increase in case rates last week. Highest case-rates are amongst our 65+ population. This *may* be due to higher rates of testing in this population.
- COVID-19 case rates decreased or were stable across most race/ethnicity groups (figure 9).
- Cases associated with long-term care facility (LTCF) outbreaks increased last week (figure 10). There were 8 new LTCF outbreaks over the last week (figure 11). The difference between cases and outbreaks may be due to reporting lag. Cases are counted the week of illness onset and outbreaks are counted based on the date they were reported to the Health Department.

Virus

COVID-19	3.22%	<i>Above 3% threshold</i>
Influenza	2.02%	<i>Above 1% threshold</i>
RSV	0.54%	<i>Above 0.3% threshold</i>

New Cases (per 100,000 population in the last 7 days)	Indicators	Low	Medium	High
49	New COVID-19 admissions per 100,000 population (7-day total) 5.4	<10.0	10.0-19.9	≥20.0
	Percent of staffed inpatient beds occupied by COVID-19 patients (7-day average) 4%	<10.0%	10.0-14.9%	≥15%

COVID-19 Surveillance Report

DATA SOURCES:

The Washington State Disease Reporting System (WDRS) is the data source for all case data. Some data have been suppressed due to inaccuracies. Not all tables and graphs will have the same denominator. All trend data are by symptom onset date or date of first positive COVID test. Only cases tested by a healthcare provider or laboratory are counted in this report. Homebased tests are not reported to public health and are not included in these data.

The data source for the percent of emergency department visit is the Electronic Surveillance System for the Early Notification of Community-Based Epidemics (ESSENCE) from the National Syndromic Surveillance Program – BioSense Platform. ESSENCE is part of the CDC National Syndromic Surveillance Program (NSSP). Data included are the percent of all emergency visits from hospitals in Snohomish County with a ICD 10-CM discharge diagnosis of COVID-19.

Hospital census data is from WAHealth (<https://wahealth.doh.wa.gov/>). WAHealth is The Regional Government Emergency Response and Monitoring solution. This monitoring system provides a set of capabilities for state and local governments to collect and visualize health system data. Data are collected from parent organizations and associated hospitals in their network/region and are used to establish situational awareness during emergency responses. The data include information about available beds, supplies, equipment, COVID-19 patients, and staffing.

All data are preliminary and subject to change.
