

Septic Permit Steps **Phase 1 of 2**

Application & Design Process Overview

STEP 1

Hire a licensed septic designer or professional engineer.

STEP 2

They will design a system to suit your property.

STEP 3

Your designer submits a septic application and design to the Health Department. If the application has all required details, a fee will be collected to process your application.

STEP 4

The Health Department will review the application and visit your property to make sure the design meets code.

STEP 5

If the design meets code, your application will be approved. Approved applications are good for two years.

For more detailed steps, visit our website at
