COVID-19 Return to Work/School Flow Chart

**KEY**
- Is a close contact\(^2\). See Page 2.
- Tested positive for COVID-19
- Has symptom(s). See Page 2.
- Probable case See Page 2.

**ASSESS STAFF OR STUDENT FOR COVID-19**

- **NO** symptoms
- **NO** COVID-19 diagnosis
- **NO** close contact of someone with COVID-19

- **May be symptomatic** (have symptoms) OR asymptomatic (no symptoms)
- **Tested POSITIVE** for COVID-19

- **NO symptoms**
- **Tested NEGATIVE**, awaiting test results or HAS NOT BEEN tested
- **Close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **1 or more symptoms** for any duration
- **Close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **1 or more symptoms** for any duration
- **Awaiting test results** or HAS NOT BEEN TESTED
- **NO close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **1 or more symptoms** for any duration
- **Tested NEGATIVE** for COVID-19 or given alternative diagnosis
- **NO close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

**Can return to building after following school’s modified quarantine plan or quarantining for 14 days.**

- **IF** no symptoms develop during 14-day period.
- **If symptoms develop**, get tested or retested.

- **If test result is positive**, follow guidance from column #2.
- **If test result is negative**, follow guidance from column #3.

If you meet the probable case definition, defined on page 2, get tested and isolate for 10 days even if the test is negative.

- If you don’t meet the probable case definition, you can return to building after following school’s modified quarantine plan or quarantining for 14 days.

**Is a close contact\(^3\). See Page 2.**

- **Tested positive for COVID-19**
- **Has symptom(s).** See Page 2.
- **Probable case** See Page 2.

- **May be symptomatic** (have symptoms) OR asymptomatic (no symptoms)
- **Tested POSITIVE** for COVID-19

- **NO symptoms**
- **Tested NEGATIVE**, awaiting test results or HAS NOT BEEN tested
- **Close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **1 or more symptoms** for any duration
- **Close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **1 or more symptoms** for any duration
- **Tested NEGATIVE** for COVID-19 or given alternative diagnosis
- **NO close contact** of someone with COVID-19
  - *See guidance for fully vaccinated individuals below*

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

- **CANNOT** go to school (can learn remotely)

**Can return to building** **after 10 days** after symptoms started AND at least 24 hours have passed since fever resolved (without medication) AND symptoms have improved.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Full vaccinated people** (2 weeks after last vaccination dose) do not need to quarantine after COVID-19 exposure. Watch for symptoms for 14 days and get tested 3-5 days after exposure. If symptoms develop, follow flowchart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) do not need to quarantine after COVID-19 exposure.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

- **Fully vaccinated people** (2 weeks after last vaccination dose) should also follow the symptom flow chart.

<tr>
<td>• Chills</td>
<td>• Congestion or runny nose</td>
</tr>
<tr>
<td>• Shortness of breath or difficulty breathing</td>
<td>• Nausea or vomiting</td>
</tr>
<tr>
<td></td>
<td>• Diarrhea</td>
</tr>
<tr>
<td></td>
<td>• Fatigue</td>
</tr>
</tbody>
</table>

*That are not explained by a preexisting condition, such as asthma.*

**PROBABLE CASE**

A “probable case” includes close contacts of a molecular- or antigen-positive person, and who have developed symptoms of COVID-19 but have either not yet tested or test results are negative or not done pending.

**Symptomatic contacts:** Probable cases should seek testing promptly, and isolate away from others in the household until test results are back. Molecular tests are preferred for probable cases. If a negative antigen test is received, the Snohomish Health District requests that a follow-up (more sensitive) molecular or PCR test is performed to confirm the diagnosis.

**If negative,** further contact tracing to identify close contacts is deprioritized not needed. The student or staff member may return to school after they have completed the 10 day isolation period and symptoms have improved.

**If positive** for COVID-19, the school should identify any close contacts in the school environment while contagious (if any). The student or staff member may return to school after they have completed their isolation period and symptoms have improved.

**CLOSE CONTACT DEFINITION**

“Close Contact” includes anyone in one or more of the following categories:

- Been within 6 feet (2 meters) of a person with COVID-19 for a combined total of 15 minutes or more within a 24-hour period
- Live in the same household as a person with COVID-19
- Cared for a person with COVID-19
- Been in direct contact with saliva or other body secretions from a person with COVID-19 (for example: been coughed on, kissed, shared utensils, etc.)

In a K-12 indoor classroom setting, the close contact definition excludes students who were at least 3 feet away from an infected student when

- Both students were wearing face coverings/masks AND
- Other prevention strategies were in place

This exception does not apply to teachers, staff, or other adults in the indoor classroom setting.

If you’ve been exposed to someone with COVID-19 and you have no symptoms, Snohomish Health District recommends the following:

1. **Stay in quarantine for 14 days after your last contact. This is the safest option.**
2. If this is not possible, and your school offers a modified quarantine, stay in quarantine for 10 days after your last contact, without additional testing.
3. If the first two options are not possible, stay in quarantine for 7 full days beginning after your last contact and if you receive a negative test result (get tested no sooner than day 5 after your last contact). **This option depends on availability of testing resources and may not be recommended in some settings.**

* Fully vaccinated people (2 weeks after last vaccination dose) with no symptoms **do not need to quarantine** after COVID-19 exposure. Watch for symptoms for 14 days and get tested 3-5 days after exposure. If symptoms develop, follow flowchart.
