COVID-19 Return to Work/School Flow Chart

ASSESS STAFF OR STUDENT FOR COVID-19

• NO symptoms
• NO COVID-19 diagnosis
• NO close contact of someone with COVID-19

Can return to building after 10 days after symptoms started AND at least 24 hours have passed since fever resolved (without medication) AND symptoms have improved.

*Fully vaccinated people (2 weeks after last vaccination dose) should also follow the symptom flow chart.

CANNOT go to school (can learn remotely)

• May be symptomatic (have symptoms) OR asymptomatic (no symptoms)
• Tested POSITIVE for COVID-19

Can return to building after following school’s modified quarantine plan or quarantining for 14 days. IF no symptoms develop during 14- day period. If symptoms develop, get tested or retested.

*Fully vaccinated people (2 weeks after last vaccination dose) do not need to quarantine after COVID-19 exposure. Watch for symptoms for 14 days and get tested 3-5 days after exposure. If symptoms develop, follow flowchart.

CANNOT go to school (can learn remotely)

• NO symptoms
• Tested NEGATIVE, awaiting test results or HAS NOT BEEN tested
• Close contact of someone with COVID-19
  *See guidance for fully vaccinated individuals below

If you meet the probable case definition, defined on page 2, get tested and isolate for 10 days even if the test is negative. If you don’t meet the probable case definition, you can return to building after following school’s modified quarantine plan or quarantining for 14 days.

*Fully vaccinated people (2 weeks after last vaccination dose) should also follow the symptom flow chart.

CANNOT go to school (can learn remotely)

• 1 or more symptoms for any duration
• Close contact of someone with COVID-19
  *See guidance for fully vaccinated individuals below

Get tested. For information about local testing locations, visit www.snohd.org/testing.

If test result is positive, follow guidance from column #2.
If test result is negative, follow guidance from column #3.

CANNOT go to school (can learn remotely)

• 1 or more symptoms for any duration
• Awaiting test results or HAS NOT BEEN TESTED

Can return to building after 24 hours have passed since fever resolved (without medication) AND symptoms have improved. OR if alternative diagnosis by health care provider, follow provider directions and isolate per condition diagnosed (whichever isolation is longer).

*Fully vaccinated people (2 weeks after last vaccination dose) should also follow the symptom flow chart.

KEY

Is a close contact? See Page 2.
Has symptom(s). See Page 2.
Probable case See Page 2.

Is a close contact?

• 1 or more symptoms for any duration
• Close contact of someone with COVID-19

CANNOT go to school (can learn remotely)

• Tested positive for COVID-19

Get tested. For information about local testing locations, visit www.snohd.org/testing.

If test result is positive, follow guidance from column #2. If test result is negative, follow guidance from column #3.

CANNOT go to school (can learn remotely)

• NO symptoms
• Tested NEGATIVE, awaiting test results or HAS NOT BEEN tested
• NO close contact of someone with COVID-19

Can return to building after 24 hours have passed since fever resolved (without medication) AND symptoms have improved.

*Fully vaccinated people (2 weeks after last vaccination dose) should also follow the symptom flow chart.

• 1 or more symptoms for any duration
• Close contact of someone with COVID-19
  *See guidance for fully vaccinated individuals below

*Fully vaccinated people (2 weeks after last vaccination dose) should also follow the symptom flow chart.
When It’s Okay to Return to Work/School

Symptomatic, but not a close contact of a confirmed COVID-19 case (regardless of vaccination status):

**Class A Symptoms**
- Fever of 100.4°F or higher
- Chills
- Muscle or body aches
- Cough
- Loss of taste and/or smell
- Shortness of breath

**Class B Symptoms**
- Fatigue
- Headache
- Sore throat
- Congestion or runny nose
- Nausea or vomiting
- Diarrhea

Okay to return if:
- It’s been at least 24 hours since any fever has resolved without medication,
- **AND** Symptoms have improved,
- **AND** 10 days have passed since symptoms started,
- **OR** A negative COVID-19 or other specific alternative diagnosis that completely explains symptoms from a healthcare provider is submitted to the school.

Okay to return if:
- Symptom lasts less than 24 hours without the use of medication. Note that a child care facility or school may have a return-to-school procedure that is more strict.
COVID-19 SYMPTOMS

- Fever (100.4°F / 38°C or higher)
- Chills
- Muscle pain or body aches
- Cough
- Loss of taste or smell
- Shortness of breath or difficulty breathing

2That are not explained by a preexisting condition, such as asthma.

CLOSE CONTACT DEFINITION

“Close Contact” includes anyone in one or more of the following categories:
- Been within 6 feet (2 meters) of a person with COVID-19 for a combined total of 15 minutes or more within a 24-hour period
- Live in the same household as a person with COVID-19
- Cared for a person with COVID-19
- Been in direct contact with saliva or other body secretions from a person with COVID-19 (for example: been coughed on, kissed, shared utensils, etc.)

In a K-12 indoor classroom setting, the close contact definition excludes students who were at least 3 feet away from an infected student when
- Both students were wearing face coverings/masks AND
- Other prevention strategies were in place

This exception does not apply to teachers, staff, or other adults in the indoor classroom setting.

If you’ve been exposed to someone with COVID-19 and you have no symptoms, Snohomish Health District recommends the following:
1. Stay in quarantine for 14 days after your last contact. This is the safest option.
2. If this is not possible, and your school offers a modified quarantine, stay in quarantine for 10 days after your last contact, without additional testing.
3. If the first two options are not possible, stay in quarantine for 7 full days beginning after your last contact and if you receive a negative test result (get tested no sooner than day 5 after your last contact). This option depends on availability of testing resources and may not be recommended in some settings.

* Fully vaccinated people (2 weeks after last vaccination dose) with no symptoms do not need to quarantine after COVID-19 exposure. Watch for symptoms for 14 days and get tested 3-5 days after exposure. If symptoms develop, follow flowchart.
Close Contacts: When to Test  
Note: If negative, continue to monitor for symptoms for the full 14 days.

Types of Tests

- **Antibody**: Shows if a person has previously been infected with COVID-19. It identifies antibodies to SARS-CoV-2, the virus that causes COVID-19 illness. Antibody tests are not used to diagnose current cases of COVID-19. The CDC does not recommend using antibody testing to diagnose an active infection.

- **Antigen**: Binds to proteins on the surface of SARS-CoV-2, the virus that causes COVID-19. They can detect if a specific viral antigen is present, which means there is a current viral infection. Antigen tests provide a more rapid turn-around-time than molecular tests, but are less sensitive than molecular tests and can have more false negative results.

- **Molecular/PCR**: Amplifies bits of viral RNA so that viral infection can be detected. The most commonly used molecular test is the Reverse Transcription Polymerase-Chain Reaction, or RT-PCR. Most need to be processed in a laboratory but some are point-of-care tests with results available in about 15–45 minutes.

Picking the Right Test

There are a number of testing types and options. Know which one to use when needed.

## What’s Okay During Quarantine*

Here is what a close contact can do, as long as they remain symptom-free, based on the quarantine model, testing offered and vaccination status.

<table>

</tbody>
</table>

*All close contacts must continue to monitor for symptoms for the full 14 days, regardless of quarantine length. If a close contact tests positive, they must isolate at home and follow isolation guidance.

**Fully vaccinated individuals still need to wear a mask, seek testing 3-5 days after exposure, and monitor for symptoms for the full 14 days.

***Test to Stay is only offered when a school/district has an approved Memorandum of Agreement in place with the Snohomish Health District, with consent from parental/guardian, the student participates in required testing, and only when the student was exposed to COVID-19 in school.
