More than 3 out of 4 students surveyed share the belief that using electronic cigarettes, such as e-cigs, JUUL, or vape pens regularly carries moderate or great risk of harm.

Less than 1% of students in grades 8, 10, and 12 have made a firm commitment to not smoke cigarettes!

Fewer students of all grades report spending time in a room with someone who was smoking cigarettes in the last 7 days, compared with previous years.

Recent (last 30 days) smoking among youth has continued a *downward trajectory.*

Recent (last 30 days) vaping among youth has *declined significantly* compared with 2018.

During the last 30 days, which e-cig or vaping products did you use?

Nearly all the e-cig or vaping products were reported to be flavored products.

*These, among other differences seen in 2021, could be an artifact of changes to daily life during the pandemic.*
