HEALTHY YOUTH SURVEY 2021

Mental Health

Over the last several years, the percent of students reporting depression increased slightly while reports of thoughts of suicide remained largely steady.*

Younger kids tended to express more worry related to the pandemic than the older cohorts.

More than half of all students reported that they do have adults in their lives they can turn to for help when feeling sad or hopeless.

In the last two weeks were you, on more than half of the days, bothered by the following feelings?

Nervous, anxious, or on edge?

Not being able to stop or control worrying?

COVID-19 Pandemic-Related Worry

Pretty worried or extremely worried about the following?

- Your parents or guardians losing their job(s)?
- Your family being unable to afford rent or housing?
- Not having enough food to eat?

Internet and Mental Health

Do you lose motivation to do other things that need to get done because of the internet often or very often?

*These, among other differences seen in 2021, could be an artifact of changes to daily life during the pandemic.
